From: Larry Dukerich, AMTA volunteer since inception

Jane's post on Saturday described the new version of the CHEMMOD listserv, including the ability to retrieve and search posts from the archive. She wrote:

C. You can easily search the chemmod listserv archives. Posts to this listserv are automatically archived.

Log in at this URL: <http://lists.asu.edu/cgi-bin/wa?A0=CHEMMOD>

You get to choose your own password, so don't be daunted by it. The search engine is great!

\*\*\*

While this is true, I'd like to encourage you to use the **chemistry forum at the AMTA member website** as well, because of its ability to have threaded discussions. You can start or respond to a discussion topic, or subscribe to a thread so that you can be notified when someone adds to the discussion. There is a short YouTube video in the Video Vault on the member home page that clearly describes the features of the various forums and how to use them. I'm hoping to see more traffic on the member forum for chemistry this year.
